this book combines elementary theory from computer science with real world challenges in global geodetic observation based on examples from the geodetic observatory wettzell germany it starts with a step by step introduction to developing stable and safe scientific software to run successful software projects the use of software toolboxes is another essential aspect that leads to the application of generative programming an example is a generative network middleware that simplifies communication one of the book s main focuses is on explaining a potential strategy involving autonomous production cells for

space geodetic techniques the complete software design of a satellite laser ranging system is taken as an example such automated systems are then combined for global interaction using secure communication tunnels for remote access the network of radio telescopes is used as a reference combined observatories form coordinated multi agent systems and offer solutions for operational aspects of the global geodetic observing system ggos with regard to industry 4 0

this book is an introduction to machine learning with a strong focus on the mathematics behind the standard algorithms and techniques in the field aimed at senior undergraduates and early graduate students of mathematics there is a focus on well known supervised machine learning algorithms detailing the existing theory to provide some theoretical guarantees featuring intuitive proofs and exposition of the material in a concise and precise manner a broad set of topics is covered giving an overview of the field a summary of the topics covered is statistical learning theory approximation theory linear models kernel methods gaussian processes deep neural networks ensemble methods and unsupervised learning techniques such as clustering and dimensionality reduction this book is suited for students who are interested in entering the field by preparing them to master the standard tools in machine learning the reader will be equipped to understand the main theoretical questions of the current research and to engage with the field

currently nonstandard analysis is barely considered in university teaching the author argues that nonstandard analysis is valuable not only for teaching but also for understanding standard analysis and mathematics itself an axiomatic approach wich pays attention to different language levels for example in the distinction between sums of ones and the natural numbers of the theory leads naturally to a nonstandard theory for motivation historical ideas of leibniz can be taken up the book contains an elaborated concept that follows this approach and is suitable for example as a basis for a lecture supplementary course the monograph part presents all major approaches to nonstandard analysis and discusses logical model theoretic and set theoretic investigations to reveal possible mathematical reasons that may lead to reservations about nonstandard analysis also various foundational positions as well as ontological epistemological and application related issues are addressed it turns out that the one sided preference for standard analysis is justified neither from a didactic mathematical nor philosophical point of view thus the book is especially valuable for students and instructors of analysis who are also interested in the foundations of their subject
